

Escendo Architect

Integrated Development Workbench for Developing, Deploying, and Managing Oracle OLAP Applications

Migrate your Express applications to OLAP Quickly and Easily!

- Preserve all of your structures, data, programs, models, etc.
- Perform Budgeting and Planning with write-back to Oracle
- Leverage 100% of Oracle OLAP functions and DML
- Avoid the costs, complexities, and constraints of rebuilding on a different BI platform

The Challenge

The de-support of Oracle Express, including Financial Analyzer and Sales Analyzer, has forced many organizations to investigate ways to migrate their sophisticated and stable Express environments – ways which in many cases will inevitably incur substantial costs, effort, and risks.

The Solution

Escendo Architect empowers companies to quickly and easily migrate their existing Express applications (including OFA, OSA, and custom apps) to Oracle OLAP with complete protection for all data, hierarchies, models, formulae, and programs as well as most reports. By using Escendo Architect, a development workbench designed for Oracle OLAP, Express users get a powerful and integrated solution for preserving the functionality and stability of their Express applications while eliminating the costs, complexities, and constraints of changing OLAP technologies.

Getting the “A” out of Oracle OLAP...And More!

Escendo Architect makes it possible to leverage all of the capabilities of OLAP – those that came from Express and many more – plus several important features unique to Architect.

Preserve your Investment

Migrate all dimensions, measures, models, and programs plus most reports from your Express environment quickly and easily.

Business Driven

Architect supports all hierarchies including level-, ragged-, and value-based to meet all organizational, financial, and regulatory demands.

Graphical Power

The industry’s only fully graphical utility for creating complex calculations without ever needing to type directly into the equation.

100% Pure OLAP

Architect provides full access to all functionality of Oracle OLAP including partition templates, surrogates, and the OLAP DML.

Robust Analyzer Client

Full write-back including multiple user support – users can update their sections of budget data simultaneously without conflict.

Universal Reporting

Automatic creation of OLAP_TABLE views for all objects for access with any relational reporting tool, plus level-based reporting structures for value-based hierarchies.

Escendo Architect Feature Summary

- Full, intuitive access to all Oracle OLAP analytic functions and DML
- Preserve all hierarchical structures, including level-, ragged- and value-based
- Write-back for planning, budgeting, modeling, and more
- Robust web client for reports and worksheets
- Pre-built OFA and OSA conversion paths for fast & easy OLAP migrations
- Multi-developer and version controls for faster, more efficient team development
- Programming tools including program editor, and full search and replace
- Scoping on measures and dimensions for improved access control
- Faster data loads and calculations through multi-threaded support
- Ability to manage substantially more data than with Express, including relational data
- Automatic creation of matching code workspace
- Graphical Calculation Builder
- Access through any SQL front end, including any BI tool

Unparalleled Development Capabilities

Escendo Architect brings robust development controls and features to your OLAP application development, and significantly improves the speed, efficiency, and flexibility of your OLAP projects.

Multi-Developer

Support an unlimited number of developers creating and working on OLAP structures in the same workspace without access conflicts.

Version Control

Manage code check-out and consolidate elements at check-in. Optional integration with Subversion to support corporate standards.

Plus, improve quality, control and efficiency with:

- Intelligent cascading deletes
- Auto-creation of code workspace
- Powerful access control on data & objects for create, edit, and delete
- Conversion mapping capabilities
- Promotion/multi-environment controls
- Code comparison and highlighting across versions and workspaces

Migrate for Better...and Faster...and Bigger

By using Escendo Architect to migrate your Express applications to Oracle OLAP, you have a perfect opportunity to improve the performance, scalability, and manageability of your decision support application. This not only makes for a better application today, but it provides an environment that will continue to meet the demands of users for years to come.

No Size Limits

Support an unlimited number of dimensions, and data volumes limited only by Oracle. Support for RAC brings maximum scalability and availability.

Multi-threaded Updates

Update several partitions within the same measure or several measures in the same workspace at one time for faster and bigger loads and updates.

Program Editor

Automatically matches <> and () structures as you are programming to help ensure code is correct, and reduce tedious structural de-bugging.

Search & Replace

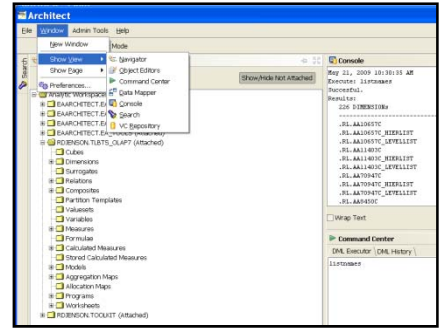

Easily search programs in one or more workspaces for words or phrases. Target code is highlighted in each program for review, or to replace all.

No Artificial Complexity

Eliminate the need to break up data and structures across multiple databases. Design based on your business needs, not the limits of the underlying technology.

Future-Proof

Architect easily supports migrations between Express, Oracle 9i, 10G, 11i, and beyond, maintaining a stable and supported platform for years to come.

Related Products and Services

Escendo Analytics:

A powerful and intuitive OLAP application that brings the extensive analytical capabilities of Oracle OLAP to the end-user. The tight integration between Oracle OLAP and Analytics means that users can now harness the intelligence, speed, and scalability of Oracle OLAP for all of their decision support needs including financial planning, budgeting, forecasting, and more - all from within the Oracle database.

Professional Services:

For the design, development, and management of Oracle OLAP applications.

Hosting Services:

In a state of the art, SAS 70 Type II data center.

Escendo is proud to be an Oracle partner and authorized reseller.

About Escendo

Escendo Corp. is a leading provider of analytic and development solutions for large-scale Oracle OLAP environments. Escendo's family of robust, OLAP-integrated products enables companies to quickly and easily deploy applications that deliver complex analytics to very large and diverse user populations using vast data volumes. Through deep integration with the Oracle database, Escendo provides users, developers, and managers with unparalleled levels of analysis, performance, security, and efficiency.
